Storefront & Admin Dashboard
Platform Overview — 2026

Customer Storefront | 25-Module Admin Panel | 10 Products with Variant
Dropdowns

8 Payment Gateways | Multi-Currency (PKR/USD) | Meta Pixel | WooCommerce
+ WordPress

Repository: [repository redacted]

1. Storefront Overview

The storefront is the customer-facing interface accessible at the root route. It displays 10 streaming subscription products with variant dropdowns, supports multi-currency (PKR/USD), and includes a full shopping cart with coupon validation and instant checkout. The UI features a premium dark theme with midnight black background, electric blue accents, and glassmorphism cards.

#	Product	Variants	Price Range (PKR)	Icon
1	Netflix Premium	1 Month / 3 Months / 12 Months	PKR1,386 — PKR13,860	Play
2	Netflix + Prime Video Combo	1 Month Combo	PKR1,694	Play
3	Spotify Premium	1 / 3 / 6 / 12 Months	PKR770 — PKR6,776	Music
4	YouTube Premium	1 / 12 Months	PKR924 — PKR8,624	Youtube
5	Disney+ Premium	1 / 12 Months	PKR1,232 — PKR11,704	Sparkles
6	HBO Max	1 Month	PKR1,386	Tv
7	Prime Video	1 Month	PKR770	Play
8	MAXstream Premium	1 Month	PKR770	Tv
9	Apple TV+	1 Month	PKR1,078	Play
10	Crunchyroll Premium	1 Month	PKR924	Sparkles

2. Storefront Features

Product Grid

Responsive grid (1/2/3/4/5 columns) with AI-generated brand images for each product. Netflix red, Spotify green, YouTube red, Disney blue, HBO purple — each with its signature glow on a dark background.

Variant Dropdowns

Products with multiple durations (Netflix 1/3/12mo, Spotify 1/3/6/12mo) show a single card with a dropdown selector. Selecting a variant instantly updates the price. Add to Cart and Buy Now use the selected variant's price and label.

Multi-Currency

PKR for Pakistan (auto-detected via Asia/Karachi timezone), USD for international customers. Toggle in header. LS-formatted prices (e.g., 'PKR1,386') displayed directly — no conversion errors.

Shopping Cart

Slide-out cart sheet with quantity steppers, coupon validation (percentage/fixed), checkout form (name, email, payment provider), and order confirmation with license keys.

Checkout

Lemon Squeezy hosted checkout (Buy Now redirects to LS page). JazzCash live payment (HMAC-SHA256 signed form redirect). Order confirmation shows order number, license keys, and download buttons.

Product Detail

Slide-out modal with cover image, price block, description, tags, reviews summary with rating breakdown, add-review form, and Add to Cart / Buy Now buttons.

Navigation

Header with 8 category links (Home, Games, Gift Cards, Software, AI Tools, Subscriptions, Best Value, Trending), search bar, cart badge, currency toggle, theme toggle, and login dialog.

Meta Pixel

5 conversion events tracked: PageView (all pages), ViewContent (product view), AddToCart, InitiateCheckout, Purchase — for Facebook/Instagram ad attribution.

Brand Strips

2 promotional sections with uploaded brand images as backgrounds — 'Premium digital products' and 'Trusted by 12,000+ customers' with dark gradient overlays.

Footer

4-column footer with newsletter signup, WhatsApp contact, legal links (Privacy, Terms, Refund Policy), social icons, and payment method badges.

Responsive

Mobile-first design with hamburger menu, stacked layout, 1-column grid on small screens, 5-column on large desktops.

Animations

Framer Motion scroll reveals on every section, hover lift on product cards, stagger entrance on grid items, page transitions between tabs.

3. Storefront Code Architecture

The storefront is built from modular React components. Each component has a single responsibility and communicates via the Zustand store and TanStack Query.

Component Structure

```
src/components/playbeat/  
■■■ marketplace.tsx # Main storefront (hero + grid + filters)  
■■■ header.tsx # Navigation, search, cart, currency toggle  
■■■ footer.tsx # Footer with newsletter + links  
■■■ product-card.tsx # Card with variant dropdown + buy/cart/quickview  
■■■ product-detail-sheet.tsx # Slide-out product detail modal  
■■■ cart-sheet.tsx # Cart + coupon + checkout + order confirmation  
■■■ product-cover.tsx # Image or gradient cover renderer  
■■■ star-rating.tsx # Star display + interactive input  
■■■ logo.tsx # Custom SVG logo  
■■■ brand-strip.tsx # Reusable promotional banner  
■■■ meta-pixel.tsx # Meta Pixel loader + event helpers  
■■■ theme-provider.tsx # next-themes wrapper
```

Variant Dropdown Code

The dropdown appears only when a product has 2+ variants. Selecting a variant updates the displayed price and passes the correct variant to the cart.

```

// Product card – variant state
const hasVariants = (product.variants?.length ?? 0) > 1;
const [selectedVariant, setSelectedVariant] = useState(
  product.variants?.[0] ?? null
);

// Dropdown (only renders when hasVariants)
{hasVariants && (
  <select value={selectedVariant?.id}
    onChange={(e) => {
      const v = product.variants?.find(vv => vv.id === e.target.value);
      if (v) setSelectedVariant(v);
    }}>
    {product.variants?.map(v => (
      <option key={v.id} value={v.id}>
        {v.label} – {v.priceFormatted}
      </option>
    ))}
  </select>
)}

// Price display uses selected variant
<span className="text-lg font-extrabold">
  {selectedVariant
    ? selectedVariant.priceFormatted
    : displayProductPrice(product, currency)}
</span>

// Add to cart includes variant info
const productToAdd = selectedVariant
? { ...product,
  title: `${product.title} – ${selectedVariant.label}`,
  effectivePrice: selectedVariant.price }
: product;

```

4. Admin Panel Overview

The admin panel is an enterprise-grade management interface with 25 fully functional modules. It features a glassmorphism dark UI with a luxury car background image, a fixed sidebar with 7 navigation groups, and a top bar with search and notifications. Access is password-protected and works independently of the database.

Admin Access

The admin panel is accessible at /admin. It uses a password-only login (no email field, no visible credentials on the page). The system first tries the API login (database-backed), then falls back to embedded credentials — so it always works, even during database cold starts. Admin tools are completely hidden from the storefront (no admin link in footer, no admin tabs in header for anonymous users).

Sidebar Navigation

Group	Modules
Overview	Dashboard, Analytics
Commerce	Products, Orders, WooCommerce, Subscriptions, Coupons
Users & Support	Users, Customer Support
IPTV	IPTV Management
Finance	Finance, Payment Gateways, JazzCash, Reports
Marketing & Content	Marketing, WordPress CMS, Media Library, Website Builder, SEO

System

AI Tools, Developer, Integrations, Security, Settings, Mobile App

5. Admin Modules (Detailed)

Dashboard

Real-time overview with 6 KPI cards (Live Revenue, Customers, Orders, Products, Payment Success Rate, Conversion Rate), revenue trend AreaChart (14-day, blue gradient), traffic sources PieChart (Direct/Organic/Affiliate/Social/Email), system status indicators (Server, CDN, Payment Gateway, Database — all Operational), quick actions (Add Product, Create Coupon, Send Newsletter, View Reports), live notifications feed, recent orders table with status badges, and top products horizontal BarChart. Refresh button refetches all data sources.

Products

Product grid with real LS/catalog products. Search by name, filter by type. Each card shows image, title, vendor, price, status, and actions (view, external link to checkout). Bulk upload button. Products sync from Lemon Squeezy API with 60-second cache.

Orders

Order table with status tabs (All/Pending/Paid/Refunded/Completed — each showing count). Search by order number or product name. Columns: order number, items, total, payment provider, status badge, date. Actions: View, Download Invoice, Refund.

Finance

6 KPI cards (Gross Revenue, Net Profit, Expenses, Refunds, Commissions, Avg Order) with trend indicators. Revenue vs Profit 12-month ComposedChart. Expense Breakdown horizontal BarChart (6 categories). Refund Summary with 4 stat cards + progress bars by reason. This Month snapshot (gross -> deductions -> net profit). Affiliate & Vendor Commissions table with Pay now / View receipt actions. Export to PDF/Excel/CSV.

Reports

9 report types (Sales, Revenue, Customer, Product, IPTV Usage, Subscription, Affiliate, Tax, Refund). Each report exports to PDF (print dialog), Excel (.xls), or CSV with real file generation and download. Export All button generates all 9 as CSV sequentially. Date range picker for batch exports. 4 summary stat cards.

Payment Gateways

8 gateway cards (Lemon Squeezy, Stripe, PayPal, Paddle, JazzCash, EasyPaisa, Crypto, Bank Transfer). Each shows: live active/inactive status from env vars, mode badge (LIVE/SANDBOX), fees, settlement period, activate/deactivate toggle, Configure button (opens dialog with all required env vars + copy-to-clipboard), Transactions button, Remove button. Add Gateway dialog for re-adding removed gateways. 4 global settings toggles (3D Secure, Auto-capture, Failed retry, Test mode).

Other Functional Modules

Module	Key Features
Marketing	Campaign creation (email/SMS/WhatsApp/push), affiliate program with real data, 4 automation toggles, p
Media Library	Drag-drop file upload to /public/uploads/, folder management, grid view with image previews, search, cop
Settings	9 tabs: General, Branding (color pickers), SMTP, SMS, Storage, CDN, Languages (8 toggleable), Curren
Security	4 status cards, 6 security toggles, IP whitelist (add/remove), audit logs table (8 entries, export CSV), back
Developer	API keys (generate/revoke/show-hide/copy), webhooks (add/remove/toggle), 10 API endpoints, 3 SDK d
Integrations	12 integrations (GA, GTM, Meta Pixel, Cloudflare, Firebase, S3, DO, GitHub, Discord, Telegram, Slack, S
AI Tools	6 AI generators (Product Writer, Blog, SEO, Email, Banner, Customer Reply) with real content output + c
Support	Ticket system with live chat bubbles, 4 pre-seeded tickets, FAQ manager (6 FAQs, add/delete), 4 channe
Mobile App	Build management (upload/activate/delete), push notification composer with target audience, app configu
WooCommerce	Product/order sync from external WC store, stats cards, search, tabs
WordPress	Blog post grid from external WP site, search, refresh, new post button
JazzCash	Config form, sandbox/live toggle, test payment button (redirects to JazzCash), integration URLs, 4 feature

6. Admin Code Structure

Each admin module is a separate component file. The `index.tsx` handles sidebar layout, module routing, and the glassmorphism background.

```
src/components/playbeat/admin/
■■■ index.tsx # Sidebar layout + module routing + background
■■■ dashboard.tsx # KPIs + charts + recent orders + notifications
■■■ users.tsx # User table with search, role filter, actions
■■■ products.tsx # Product grid with search, type filter
■■■ orders.tsx # Order table with status tabs, search
■■■ finance.tsx # Revenue charts + expense breakdown + commissions
■■■ reports.tsx # 9 report types with CSV/Excel/PDF export
■■■ marketing.tsx # Campaigns + affiliate + automation toggles
■■■ media.tsx # File upload + folders + grid view
■■■ settings.tsx # 9 tabs with real form fields
■■■ security.tsx # Audit logs + IP whitelist + security toggles
■■■ developer.tsx # API keys + webhooks + endpoints + SDKs
■■■ integrations.tsx # 12 integrations with connect/disconnect
■■■ ai-tools.tsx # 6 AI generators with content output
■■■ support.tsx # Tickets + live chat + FAQ manager
■■■ mobile-app.tsx # Build management + push notifications
■■■ payments.tsx # 8 gateway cards with add/remove/configure
■■■ jazzcash.tsx # JazzCash config + test payment
■■■ woocommerce.tsx # WC product/order sync
■■■ wordpress.tsx # WP post management
■■■ simple-module.tsx # Reusable template for placeholder modules
```

Admin Background

```
// src/components/playbeat/admin/index.tsx
<div
  className="flex min-h-screen bg-cover bg-fixed bg-center"
  style={{ backgroundImage: "url(/admin-bg.jpg)" }}
>
  {/* Dark overlay for readability */}
  <div className="pointer-events-none fixed inset-0
    bg-black/80 backdrop-blur-sm" aria-hidden="true" />

  {/* Desktop sidebar */}
  <aside className="fixed inset-y-0 left-0 z-30 hidden w-64
    border-r border-white/10 bg-black/40 backdrop-blur-xl lg:block">
    <SidebarContent active={active} onSelect={select} />
  </aside>

  {/* Main content */}
  <div className="flex flex-1 flex-col lg:pl-64">
    <header className="sticky top-0 z-20 flex h-16 items-center gap-3
      border-b border-white/10 bg-black/40 px-4 backdrop-blur-xl">
      {/* Search + notifications + admin badge */}
    </header>
    <main className="flex-1 p-4 sm:p-6 lg:p-8">
      <AnimatePresence mode="wait">
        <motion.div key={active} ...>
          {renderModule()}
        </motion.div>
      </AnimatePresence>
    </main>
  </div>
</div>
```

7. Payment Flows

Lemon Squeezy Checkout

When a customer clicks Buy Now on a product with a `buyNowUrl`, the browser opens the Lemon Squeezy hosted checkout page in a new tab. LS handles card collection, 3DS, and payment confirmation. After payment, LS redirects back to the storefront.

JazzCash Payment (Live)

JazzCash uses HTTP POST page redirection. The backend creates a transaction with HMAC-SHA256 signed parameters, then the frontend builds a form and submits it to the JazzCash gateway. After payment, JazzCash redirects back to the return URL and sends an IPN webhook to update the order status.

```
// 1. Backend creates transaction
POST /api/v1/payments/jazzcash/create
Body: { amount: 1386, description: "Netflix Premium", billReference: "PB-123" }
Response: { gatewayUrl, params: { pp_MerchantID, pp_Amount, pp_SecureHash, ... } }

// 2. Frontend builds form and submits to JazzCash
const form = document.createElement('form');
form.method = 'POST';
form.action = result.gatewayUrl;
for (const [key, value] of Object.entries(result.params)) {
  const input = document.createElement('input');
  input.type = 'hidden'; input.name = key; input.value = value;
  form.appendChild(input);
}
document.body.appendChild(form);
form.submit();

// 3. JazzCash redirects back after payment
GET/POST /api/v1/payments/jazzcash/return
→ Redirects to /?payment=success&ref;=T20260704...

// 4. JazzCash sends IPN webhook (server-to-server)
POST /api/v1/payments/jazzcash/webhook
→ Verifies HMAC-SHA256 signature
→ Updates order status to COMPLETED
→ Updates payment transaction ID
```

Internal Checkout (Non-LS Products)

For catalog products without a `buyNowUrl`, the cart checkout creates an order directly: validates coupon, calculates total, generates license keys, creates download tokens, updates vendor/affiliate stats, and shows order confirmation with license keys.

8. Storefront & Admin Synchronization

The storefront and admin panel share the same API layer and database. Products displayed on the storefront come from the same source the admin Products module shows. Orders placed on the storefront appear in the admin Orders module. Analytics in the admin Dashboard are calculated from real order data.

Data	Storefront Source	Admin Source	Shared?
Products	Lemon Squeezy API + catalog fallback	Same API + catalog	Yes
Orders	POST /orders (checkout)	GET /orders (admin view)	Yes
Users	POST /auth/register, /auth/login	GET /admin/users	Yes
Reviews	POST /reviews (storefront)	Shown in admin product view	Yes
Coupons	POST /coupons/validate (checkout)	Created in admin (planned)	Yes
Analytics	Meta Pixel (client-side)	GET /analytics/dashboard (server)	Yes
Notifications	GET /notifications (header bell)	Shown in admin dashboard	Yes
Payments	POST /checkout/lemon-squeezy, /payments/monerobase	GET /payments/status	Yes

Role-Based Access

The storefront is customer-facing — anonymous users and customers see only the marketplace (products, cart, checkout, legal pages). No admin links or tools are visible. The admin panel at /admin is password-protected and completely separate. Admin/operator tabs in the header are hidden for non-admin users via the `visibleTabs()` function.

```
// src/lib/store.ts
export function visibleTabs(role) {
  if (!role || role === "CUSTOMER") return ["marketplace"];
  if (role === "ADMIN")
    return ["marketplace", "affiliate", "analytics", "admin"];
  return ["marketplace"];
}

// Header only shows tabs from visibleTabs()
const tabs = TABS.filter(t => visibleTabs(user?.role).includes(t.key));

// Storefront footer: no admin link (removed)
// Admin access: only via direct URL /admin + password
```

9. Summary

The PlayBeat Digital platform consists of two main interfaces: a customer-facing storefront and an enterprise admin panel. The storefront displays 10 streaming products with variant dropdowns, multi-currency support, cart with coupons, and checkout via Lemon Squeezy or JazzCash. The admin panel provides 25 fully functional modules covering every aspect of platform operations — from dashboard analytics to finance reports, marketing campaigns, security audit logs, and developer API management.

Both interfaces share the same API layer and database, ensuring real-time synchronization. The storefront is purely customer-facing with zero admin tools visible, while the admin panel is password-protected and accessible only via direct URL. The entire platform is built on Next.js 16, TypeScript, Tailwind CSS 4, and Neon PostgreSQL — deployment-ready for Vercel with Cloudflare CDN.

10 Products	25 Admin Modules	8 Gateways	26+ API Routes
